Sequence 17, Application US/09623551

Patent No. 6774281

GENERAL INFORMATION:

APPLICANT: Stuiver, Maarten

APPLICANT: Custers, Jerome

APPLICANT: Simons, Lambertus

TITLE OF INVENTION: Plants

TITLE OF INVENTION: Plants

TITLE OF INVENTION: Plants

FILE REFERENCE: MOG57706(UST

CURRENT FILING DATE: 2000-11-15

PRIOR PPLICATION NUMBER: EP 98104076.9

PRIOR FILING DATE: 1998-03-06

PRIOR FILING DATE: 1999-03-08

NUMBER OF SEQ ID NOS: 29

SOFTWARE: Patentin Ver. 2.1

L Submitted (18-NOV-2003) Genoscope - Centre National de Sequencage :
BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr
- Web : www.genoscope.cns.fr)
The sequences are based on single pass reads.
Life Technologies (a division of Invitrogen) members carried out
full-length librairies construction : Temple G.
Genoscope members carried out sequencing and annotation : Castelli
V., Aury J.M., Jaillon O., Wincker P., Menard M., Cruaud C.,
Schachter V., Weissenbach J., Salanoubat M.
URGV INRA : Clepet C., Caboche M.
Annotation is based on the June 2003 version of the Arabidopsis
genome released by MIPS (Munich Information center for Protein
Sequences). 5 prime and 3 prime are assembled with Phrap.

BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr)

- Web : www.genoscope.cns.fr)

The sequences are based on single pass reads.

Life Technologies (a division of Invitrogen) members carried out full-length librairies construction : Temple G.

Genoscope members carried out sequencing and annotation : Castelli V., Aury J.M., Jaillon O., Wincker P., Menard M., Cruaud C., Schachter V., Weissenbach J., Salanoubat M.

URGY INRA : Clepet C., Caboche M.

Annotation is based on the June 2003 version of the Arabidopsis genome released by MIPS (Munich Information center for Protein Sequences) : 5 prime and 3 prime are assembled with Phrap.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            http://www.genoscope.cns.fr/externe/sequences/Banque_Projet_EF/Full_length

5184 1137 Direct Submitted (18-NOV-2003) Genoscope - Centre National de Sequencage: Submitted (18-NOV-2003) Genoscope - Centre National de Sequencage: Bp 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr - Web: www.genoscope.cns.fr)

The sequences are based on single pass reads.

Life Technologies (a division of Invitrogen) members carried out full-length librairies construction : Temple G.

Genoscope members carried out sequencing and annotation : Castelli V., Aury J.M., Jaillon O., Wincker P., Menard M., Cruaud C., Schachter V., Weissenbach J., Salanoubat M.

URGV INRA : Clepet C., Caboche M.

Annotation is based on the June 2003 version of the Arabidopsis genome released by MIPS (Munich Information center for Protein Sequences). 5 prime and 3 prime are assembled with Phrap.

TAIL-PCR was used to generate sequencing templates that represent A.t. genomic DNA flanking the left border of the pDs-Lox T-DNA insert. PCR products were sequenced directly by using the p745 primer 5' AACGTCCGCAATGTGTTATTAAGTTGTC 3'"

GC Coupland (coupland-ad-miproment and physiological
performance), a Trilateral Co-Operation in Plant Genomics between
Spain (McY7), France (GENOPLANTE) and Germany (GABI) coordinated by
G. Coupland (coupland-ad-mipiz-keeln.myg.de). Authors: Vincent
Thareau (IBP-Orsay UMR8618 CNRS-UPS, thareau-ad-ibp.u-psud.fr) and
Alain Lecharny (MCKV-Exry UMR INRA-CNRS-UBVE,
Lecharny ad-ibp.u-psud.fr).
Definition of the terms used to describe the quality of the clone:
The about 2550 sequences from the clone collection were sorted
according to clones and clustered. If more than one contig was
formed, the clone was designated 'Contemination'. The contigs and
singletons were blasted against CDS plus pseudogenes from the
TIGRV5 annotation, and the resulting AGI code is presented if more
than 90 percent identity was found. The sequences or contigs for which
against all TIGRV5 introns, and matches longer than 50 percent identity
against all TIGRV5 protein sequences was performed. Full good: better than 95 percent of the sequences
to be percent identity; full good: better than 95 percent of the sequence;
weak similarity: less than 95 percent of the sequence;
                                                                                                                                                                                                                                                                                                                                                                                                             DR750042

/note=Tvector: pDONR201; In the context of the EU-funded project REGIA (QLG-CT11999-00876, coordinator Javier Paz-Ares), a Set of transcription factor ORFs was generated. The ORFs were produced in a decentralized way in the labs of the participants. Most of the ORFs were generated by RT-PCR using CDNA from various A. thaliana tissues as a template. Initially, it was planned to use yeast recombination to move the ORFs from the cloning vectors into target constructs. For this reason, a number of the clones contein 'REGIA tags' (RG_tagl: Spr-AATTCCCACCACCACC-3pr; RG_tagl: During the lifetime of the Spr-CATGGCAATTCCCGGGATC-3pr; During the lifetime of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          project, the GATEWAY system became available and finally all ORFs were transferred into GATEWAY vectors. At the end of the REGIA project, the clones were collected as plasmid DNA. For end-sequencing at the DNA core facility of the MPI of Plant Breeding Research (ADIS, head: Bernd Weisshaar), the plasmids were re-transformed into MPISALPha, arrayed into 96 well plates and new plasmid DNA was prepared. Re-transformation proved to be difficult because a number of clones displayed poor growth. Data submission has been handled by GabiPD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      4352
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             4412
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                4472
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       4532

Definition of the terms used to describe the quality of the clone:
The about 220 sequences from the clone collection were sorted
according to clones and clustered. If more than one contig was
singletons were blasted against Contamination. The contigs and
singletons were blasted against CDS plus pseudogenes from the
TIGRYS annotation, and the resulting AdI code is presented if more
than 90 percent identity was found. The sequences were also blasted
against all TIGRYS introns, and matches longer than 50 bp with 95
percent identity are reported as 'intron found'. The remaining
terms for SeqAnalysis describe the outcome of the evaluation of the
CDS defected after pairwise alignment with CDS plus pseudogenes
from the TIGRYS protein sequences or contigs for which
a full CDS with or without STOP codon was detected, a BLASTp
against all TIGRYS protein sequences was performed. Full perfect:
100 percent identity, full good: better than 95 percent identity
over more than 95 percent of the sequence; partial good: better
than 95 percent identity over less than 95 percent identity
weak similarity: less than 95 percent identity
weak similarity: less than 95 percent identity
weak similarity: less than 95 percent of the sequence;
better that the collection contains a few clones for which sequencing was
not successful, which could have simple technical reasons.
Obviously, information about these clones is missing in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /clone=1006-G10"

//clone=Tweetcr: pDOMR201; In the context of the EU-funded project REGIA (QLG-TIL1999-00876, coordinator Javier Paz-Ares), a set of transcription factor ORFs was generated. The ORFs were produced in a decentralized way in the labs of the participants. Most of the ORFs were generated by RT-PCR using cDNA from various A. thaliana tissues as a template. Initially, it was planned to use yeast recombination to move the ORFs from the cloning vectors into target constructs. For this reason, a number of the clones contain 'REGIA tags' (RG_tag1:

Lechanty add-lugh-lugual.117.

Definition of the terms used to describe the quality of the clone: The about 2250 sequences from the clone collection were sorted according to clones and clustered. If more than one contig was formed, the clone was designated 'Contamination'. The contigs and singletons were blasted against CDS plus pseudogenes from the TIGRV5 annotation, and the resulting ACI code is presented if more than 90 percent identity was found. The sequences were also blasted against all TIGRV5 introns, and matches longer than 50 by with 95 percent identity are reported as 'intron found'. The remaining terms for Sequalaylysis describe the outcome of the evaluation of the CDS detected after pairwise alignment with CDS plus pseudogenes from the TIGRV5 annotation file. The sequences or contigs for which a full CDS with or without STOP codon was detected, a BLASTP against all TIGRV5 protein sequences was detected, a BLASTP against all TIGRV5 full good: better than 95 percent identity over more than 95 percent of the sequence; partial good: better than 95 percent of the sequence; martial good: better than 95 percent of the sequence; martial good: better than 95 percent of the sequence; no similarity; no hit from BLASTP. Note that the collection contains a few clones for which sequencing was not successful, which could have simple technical reasons.

Obviously, information about these clones is missing in the front transfer transfer transfer transfer. William State of Experiments and the second of the second /....= voci DH5alpha"

/note="Vector: pDONR201; In the context of the EU-funded project REGIA (GLG-CT11999-00876, coordinator Javier Paz-Ares), a set of transcription factor ORFs was generated. The ORFs were produced in a decentralized way in the labs of the participants. Most of the ORFs were generated by RT-PCR using cDNA from various A. thaliana tissues as template. Initially, it was planned to use yeast recombination to move the ORFs from the cloning vectors into target constructs. For this reason, a number of the clones contain 'REGIA tags' (RG_tag1:
5pr-AATTCCAGCCACC-3pr; RG tag2:
5pr-CATGGCAATTCCCGGGGATC-3pr). During the lifetime of the Paz-Ares, Costantino, Vittorioso, Davies, Gilmartin, Giraudat, Parcy, Sabl owski, Coupland, Martin, Angenent, Baeumlein, Carbonero, Colombo, Tonelli, Engstroem, Droege-Laser, Gatz, Kavanagh, Kushnir, Zabeau, Laux, Holdsworth

project, the GATEWAY system became available and finally all ORFs were transferred into GATEWAY vectors. At the end of the REGIA project, the clones were collected as plasmid DNA. For end-sequencing at the DNA core facility of the MPI of Plant Breeding Research (ADIS, head: Bernd Weisshaar), the plasmids were re-transformed into DHSalpha, arrayed into 96-well plates and new plasmid DNA was prepared. Re-transformation proved to be difficult because a number of clones displayed poor growth. Data submission has been handled by GabiPD (http://gabi.rzpd.de)."

                            /clone lib="mill - RescueMu Grid AA"
/clone lib="Organ: leaf; Vector: RescueMu (engineered from pBlueScript backbone); Site l: BamHi, Site_2: BgJII; RescueMu is a 4.9 kb, modified maize Mu transposon designed to allow plasmid rescue from total genomic DNA. Mu elements insert preferentially into transcription units. For more information on RescueMu, go to the web site 'www.zmdb.iastate.edu' and follow the links for 'RescueMu.' Grid AA was grown at UC San Diego in 2002. DNA was extracted from leaf strips, double digested using BamHI and BgIII, and ligated to form circular plasmids. DHIOB calls were transformed and then screened on LB plates with ampicillin."
